

Outlier Desk

Proven content ideas, researched by people who find them every day.

A marketplace where content creators post research briefs and verified Content Research Experts pitch proven video ideas. Creators see the proof first and pay only for the ideas they unlock.

Version 1.1

Status

Working product, test mode

A safer, cheaper way to buy and sell content research

Short-form creators need a steady stream of ideas that are proven to work. Skilled researchers in the Philippines find these ideas every day. The two sides have no good way to trade: an idea can't be shown before it's paid for, because once it's seen it can be copied for free.

Outlier Desk solves this with a **locked pitch card**. The creator sees the proof (how far a video beat its channel's usual views, the format, the platform) but not the idea itself. Paying to unlock reveals the source video, the hook and the filming instructions, and pays the researcher at that moment. Budgets are funded up front and unused money is refunded automatically.

5%

Creator marketplace fee,
refunded on unused budget

10%

Researcher service fee,
deducted per unlock

72h

Dispute window before
earnings can be withdrawn

What exists today

- A working web app: sign-up, researcher verification, briefs, locked pitches, unlocks, refunds, disputes, reviews, messaging, wallet and payouts, plus a full admin panel.
- New tools built from creator and researcher research: an **idea board** with result tracking, a **swipe file** for researchers, pitch shortlists and feedback, saved researchers with invites, and researcher levels.
- Payments run in test mode behind a swappable provider, with Xendit integration written and ready for a sandbox check.
- Automated tests cover the money rules, privacy rules, a race between two simultaneous unlocks, and the full flow in a real browser.

What we're asking for

Approval to run a closed pilot with 20 to 30 verified researchers and the first creators, followed by switching on real payments once the legal review and Xendit account checks are done.

THE PROBLEM

Ideas are the bottleneck, and there's no safe way to buy them

Creators run out of ideas

In creator surveys, **51%** say constantly coming up with ideas is a cause of burnout, and **40%** name creative fatigue as the main one. Most track ideas in spreadsheets and never learn which sources actually work for them.

Source: ION / Vibely creator burnout survey

Researchers can't show their work safely

Ideas aren't protected by copyright. A researcher who shows an idea before payment can lose it. General freelance sites bury this work, charge up to 20% and have no way to show proof before paying.

THE SOLUTION

Show the proof, lock the idea

Every pitch is split into two parts. The public part proves the idea is worth paying for. The locked part is stored separately in the database and is only readable by the researcher and, after payment, the creator who unlocked it. It never reaches the creator's browser before unlock.

Before unlock

- Outlier score: views ÷ the channel's median views
- Views compared with the channel median
- Platform, format, hook type, length, posting date
- A short angle that doesn't give away the hook
- The researcher's unlock rate, rating and level

After unlock

- The source video link
- The exact hook words
- Why it worked
- Step-by-step filming instructions and shot list
- How to adapt it, plus an optional proof screenshot

The database blocks the pitches that would weaken this model: a teaser that reveals the hook, a source another researcher already pitched on the brief (matched across URL formats), and contact details used to go off-platform.

From brief to filmed video

- 1 The creator posts a brief and funds it.** They set the platform, niche, price per idea, how many ideas they want and a deadline. A template or an earlier brief can be used as a starting point. The budget plus a 5% fee is paid up front.
- 2 Verified researchers in that niche are notified.** The creator can also invite researchers they saved before, even outside their usual niches.
- 3 Researchers send locked pitch cards.** Each one shows the proof but keeps the idea hidden. Researchers can pitch straight from their swipe file with the details already filled in.
- 4 The creator reviews and unlocks.** They can sort by score, filter by hook type, shortlist, or pass with a reason the researcher sees. An unlock reveals the idea and moves the price to the researcher's held balance.
- 5 The idea goes onto the creator's idea board.** It moves from To do through Scripting and Filming to Posted. Once it's posted, the creator logs the views and the researcher sees the result.
- 6 The money settles.** After a 72-hour dispute window, earnings become withdrawable to GCash, Maya or a bank. When the brief closes, unused budget and its share of the fee are refunded.

BRIEF

10 TikTok money ideas for young professionals

Live Post a similar brief

TikTok Personal finance min 3.0x source ≤ 180 days old

I make 30–45 second talking-head videos about money for people in their first jobs. I want proven ideas with a clear promise in the first line and something I can show on screen (an app, receipts, a spreadsheet).

MUST INCLUDE
Face on camera. Filmmable alone at home.

AVOID
Crypto and stock picks.

BUDGET

\$8.00 / idea

0 of 5 unlocks used · \$40.00 left · closes in 6d

Budget	\$40.00
Marketplace fee	\$2.00
Total charge	\$42.00

Close brief

☐ Close now and refund \$40.00 of unused budget. Waiting pitches won't be unlockable.

ANGLE

Asking strangers one money question with surprising answers

Feedback

A creator's live brief. Pitches are sorted by outlier score; each card is locked until the creator unlocks it for \$8.

Buy proven ideas, then see which ones actually worked for you

The idea board. Each unlocked idea moves from To do to Posted, and a logged result shows how it did compared with the creator's usual views.

Idea board and results

Group ideas into batches, set filming dates and keep private notes. After posting, the creator logs the views. Researchers see the result but never the creator's link or notes.

Pitch review tools

Sort by score or date, filter by hook type, shortlist the best, and pass with a reason. The pass reason teaches researchers what this creator wants.

Saved researchers and invites

Save researchers you trust and invite them to a live brief with one click. Repeat work with researchers who know your style is the fastest way to good ideas.

Hook library and AI prompt

Search every unlocked hook and angle. One click copies a ready-made prompt for any AI writing tool, built from the idea. Nothing is sent to an AI service by the app.

Faster briefs

Start from templates (talking head, storytime, tutorial, trend remix) or copy an earlier brief with "Post a similar brief".

Budget control

Live fee breakdown before paying, a budget meter, early close with automatic refund, CSV export of everything unlocked, and a 72-hour dispute option.

A steady income stream and a track record built on real results

The swipe file. Saved finds show which open briefs they fit, with a one-click prefilled pitch.

The public profile shows verification, level, unlock rate, repeat buyers and the average result creators got.

Swipe file

Save an outlier the moment it's found, before any brief exists. The app shows which open briefs it fits, and pitching fills in the link, views and date.

Feedback that improves pitches

"My pitches" shows why a creator passed and how a posted idea performed. No other outlier tool can show this.

Levels and trust signals

New, Rising, Pro and Top rated levels are based on unlocks, rating, repeat buyers and results. Higher levels win more unlocks and invites.

Find the right work

Briefs in their niches, filters for platform and minimum pay, sorting by newest, highest pay or closing soon, and an invited-only view.

Protected earnings

Money is already in escrow before they pitch. Earnings are held for 72 hours, then withdrawn to GCash, Maya or a bank in pesos.

Verified marketplace

ID verification and three portfolio finds are required, which keeps quality high and the researcher pool trusted.

Built so the rules can't be skipped

The important rules live in the database itself, not only in the website, so they hold even if someone calls the system directly.

RISK	HOW OUTLIER DESK HANDLES IT
Idea theft before payment	Locked content is stored in a separate table that only the researcher, an admin, or the creator after a valid unlock can read. Browser tests confirm the locked page contains none of it.
Going off-platform	Emails, phone numbers, links and social handles are automatically hidden in chat, briefs, pitches and feedback, and flagged for an admin.
Fake or reused finds	The same video can't be pitched twice on one brief, even in a different URL format. A minimum outlier score and source age are enforced. Proof screenshots are optional, and a dispute can be opened within 72 hours.
Overspending a budget	Unlocks are atomic. In testing, two creators unlocking the last slot at the same moment always produce exactly one success.
Money errors	All amounts are whole cents. Every change writes to an append-only ledger, and each brief's escrow balances to zero.
Fraudulent researchers	Government ID and selfie verification (stored privately), admin approval, payout approval with the exchange rate recorded, and account suspension.
Privacy of the creator's results	Researchers only see the stage and the result multiple of their own ideas, never the creator's video link or notes.

FILL RATE

100%

Closed briefs with ≥1 unlock. Target 60%.

SCHEDULED JOBS

These run automatically (daily on the free plan): close briefs past their deadline, release 72-hour holds, send refunds. Run them now when testing.

Run scheduled jobs now

The admin overview: funded volume, revenue, fill rate, and queues for verifications, disputes, payouts, refunds, flags and tester feedback.

Small fees on both sides, only on money that's actually used

REVENUE STREAM	RATE	PAID BY	WHEN
Marketplace fee	5%	Creator	Added when the brief is funded; refunded on unused budget
Service fee	10%	Researcher	Deducted from each unlock
Featured briefs (planned)	\$10	Creator	Optional, when posting
Researcher Pro (planned)	~\$9/mo	Researcher	Subscription

Worked example

A creator posts a brief: **\$8 per idea, up to 5 ideas**. They unlock 3 ideas, then close the brief.

CREATOR	AMOUNT	RESEARCHER AND PLATFORM	AMOUNT
Budget, 5 × \$8	\$40.00	Researcher, per unlock (\$8 – 10%)	\$7.20
Marketplace fee, 5%	\$2.00	Researcher, 3 unlocks	\$21.60
Paid up front	\$42.00	Platform: creator fee kept	\$1.20
Refund: 2 unused ideas + their fee	–\$16.80	Platform: service fees, 3 × \$0.80	\$2.40
Final cost for 3 ideas	\$25.20	Platform revenue	\$3.60

The creator pays the 5% fee only on the ideas they use. Researchers keep 90%, compared with up to 80% on general freelance platforms. All fee rates can be changed in Admin → Settings and are copied onto each brief, so open briefs never change.

Metrics we'll track in the pilot

Fill rate

Share of funded briefs with at least one unlock. Target 60% or more.

Speed

Time to first pitch. Target under 12 hours.

Quality

Dispute rate under 3% of unlocks; average logged result above 1× the creator's usual views.

A modern stack, tested end to end

Web app

Next.js 15 with TypeScript and Tailwind CSS. Designed for phones first, with light and dark themes and keyboard shortcuts (⌘K command palette).

Database and accounts

Supabase: Postgres with row-level security on every table, email sign-in, and private file storage for ID photos and proof screenshots.

Payments

A provider interface with a built-in test mode. The Xendit integration (cards in USD, payouts to GCash, Maya and banks in PHP) is written and ready for a sandbox check.

Hosting and jobs

Vercel hosting. A scheduled job closes briefs at the deadline, releases held earnings and processes refunds. Admins can also run it manually.

How it's tested

LAYER	WHAT'S CHECKED
Unit tests	Fee math matches the database exactly (5,000 random cases), plus the outlier score, researcher levels and the AI prompt builder.
Database tests	The full marketplace flow and every privacy rule: locked content, idea-board privacy, feedback, invites, swipe files, the ledger balancing to zero, and the simultaneous-unlock race.
Browser tests	Two complete journeys in a real browser. The first goes from sign-up to verification, brief, pitch, locked check, unlock, chat masking, refund and payout. The second covers the swipe file, shortlist and pass, the idea board and results, and invites.

Creator dashboard.

Researcher dashboard.

From test mode to the first real payout

Before launch

- Legal review of the terms, privacy policy, refund policy and researcher agreement by a Philippine lawyer, including the escrow setup.
- Business registration (DTI or SEC) and BIR registration, with the numbers shown in the site footer.
- Confirm with Xendit: USD card payments, partial refunds and payout channels for GCash, Maya and banks.
- Trademark check for the name "Outlier Desk" with IPOPHL before buying the domain.
- Admin two-factor login, rate limiting, error monitoring and analytics; email domain set up with SPF, DKIM and DMARC.

Next features, ranked

#	FEATURE	WHY	EFFORT
1	Request a variation	One free alternate hook per unlock, like a Fiverr revision	Medium
2	Saved-search alerts	Notify researchers only about briefs above their chosen pay	Small
3	Response-time badge	A trust signal buyers rely on when choosing	Medium
4	Creator persona	Audience and voice saved once, reused in every brief and AI prompt	Small
5	Weekly digest email	Overdue ideas, unlogged results, new briefs	Small
6	Retainers and team seats	Recurring income for researchers; agency workflows	Large
7	Automatic view counts	Fetch views from the YouTube Data API to reduce disputes	Medium

The edge: outlier tools can show that a video went viral. Only a marketplace can show that an idea worked *for the creator who bought it*. Every logged result makes the next purchase easier to trust.
